

ALPHABAN 10 SC SUSPENSION CONCENTRATE

A potent broad-spectrum insecticide based on the synthetic pyrethroid alpha-cypermethrin which gives rapid knock-down and kill of both crawling and 'resting' flying insects.

Alphaban 10 SC is formulated as a high strength 'suspension concentrate' with unique formulation characteristics which produce micro-fine insecticidal particles which can leave a highly residual deposit on all common spray surfaces.

Alphaban 10 SC is formulated for the control of cockroaches, crickets, ticks, ants, flies, fleas, lice, fire-brats, silverfish, woodlice, centipedes and other crawling and (resting) flying insects. Alphaban 10 SC controls red poultry mite and 'litter beetles'.

Alphaban 10 SC contains 9.8% w/w alpha-cypermethrin.

Alphaban 10 SC should be diluted with water and applied using conventional compression spray equipment. Alphaban 10 SC is available both as a cost-efficient 'bulk' pack, containing 5 litres of product or as a convenient 1 litre bottle. For most insect control, a 12.5ml product dose will make 5 litres of 'ready-for-use' spray, which will treat 100 square metres of sprayable surface. When a 'clean-out' or 'attack' rate is required, use 25ml product to prepare 5 litres of ready-for-use spray.

Rapid Acting and Cost Effective

- Excellent residual activity, good knockdown and kill of all public health pests.
- Formulated as a high strength product with very high 'cost-efficacy' ratio.
- Good residual action on most common surfaces including wood, metal, plastics, wall-paper and carpets, and all other common domestic surfaces, as well as bricks and tiles.
- Also effective against red poultry mites, ticks, lice and litter beetles.
- Supplied either as a cost-efficient 5 litre bulk pack, containing over 400 full doses, or in a more convenient and user-friendly 1 litre bottle, suitable for small-scale users.
- Excellent storage stability when stored in un-opened packs. Store above 5°C.
