

CIMETROL SUSPO-EMULSION

A potent broad-spectrum insecticide based on the synthetic pyrethroid alpha-cypermethrin providing rapid knock-down and kill of both crawling and 'resting' flying insects.

Cimetrol is formulated as a high strength 'suspo-emulsion' combining the joint benefits of a suspension concentrate (residuality) and an 'oil-in-water' emulsion (speed of action).

Cimetrol is specifically formulated for the control of bed-bugs and fleas, but offers supreme control of all other pests, including cockroaches, earwigs, silverfish and other bristletails, beetles (and their larvae), ants, spiders, mites, ticks, lice, flies, mosquitoes, moths (and their larvae) and wasps.

Cimetrol contains 4.65% w/w alpha-cypermethrin, 4.65% w/w tetramethrin and 1.86% w/w of the Insect Growth Regulator (IGR) pyriproxyfen. This is one of the most potent IGRs available, and as a 'juvenoid' disrupts the normal moulting pattern of insect pests, exerting a completely different control effect compared to the acute killing agent alpha-cypermethrin. This provides a unique 'double-action' control effect.

Cimetrol should be diluted with water and applied using conventional compression spray equipment. Cimetrol is available both as a cost-efficient 'bulk' pack, containing 5 litres of product or as a convenient 0.5 litre 'auto-measure' bottle. A 25ml product dose

will prepare 5 litres of 'ready-for-use' spray which will treat 100 square metres of sprayable surface.

Rapid Acting and Cost Effective

- Excellent 'flushing' activity with fast knockdown and kill of bed-bugs and fleas.
- Unique dual action, combining a highly potent IGR and a powerful acute insecticide.
- Formulated as a high strength product to provide maximum insecticidal effect.
- Very long residual action on most common surfaces including wood, plastics, wall-paper and carpets and all other common domestic surfaces, as well as bricks and tiles.
- A broad spectrum of activity against all other significant public health pests.
- Supplied either as a cost-efficient 5 litre bulk pack, containing 200 full doses, or in a convenient and user-friendly 0.5 litre 'auto-dose' bottle suitable for small-scale users.
- Excellent storage stability when stored in un-opened packs. Store above 5°C.
