

CYTROL FORTE WP WETTABLE POWDER

A fast-acting broad-spectrum multi-purpose insecticide, based on the synthetic pyrethroid cypermethrin, providing rapid knock-down and kill of both crawling and 'resting' flying insects.

Cytral Forte WP is formulated as a high strength wettable powder with 400g per kilogram of active material.

Cytral Forte WP should be suspended with water and applied using conventional compression spray equipment. Cytral Forte WP is available both as a cost-efficient 'bulk' pack, containing 250g product and a measuring scoop, or as multiple packs of 10g soluble sachets. A 10g product dose will prepare 5 litres of 'ready-for-use' spray which will treat 100 square metres of sprayable surface.

Rapid Acting and Cost Effective

- Excellent 'flushing', knockdown and kill of all crawling and 'resting' flying insects.
- Formulated as a high strength product to provide maximum insecticidal effect.
- Very long residual action on most common, as well as porous, surfaces.
- Cost-effective control of cockroaches, fleas, ants, bed-bugs and all other crawling insects, as well as 'resting' flying pests, such as mosquitoes, houseflies, wasps etc.
- Supplied either as cost-efficient 250g bulk pack, containing 25 full doses or in the more convenient and user friendly 'unit-dose' 10g water-soluble sachets.
- Excellent storage stability when stored in un-opened packs.
