

PELGAR READY-FOR-USE BAITS

Prepared as 0.005% w/w (0.05g/kg) of the second generation anticoagulants **difenacoum, bromadiolone and brodifacoum**.

PelGar offers a complete range of robust and effective ready-for-use rodenticides which have been formulated to give the pest controller AND the rodents a choice of active materials and bait formats.

There is no such thing as a 'universal bait'. Different situations and/or seasonal conditions may warrant the use of different control strategies and selecting an appropriate food base may make all the difference between moderate or complete control of a pest population.

Grain based baits account for most of those sold in Europe. However, depending on requirements, pellets, wax blocks and pasta baits can be manufactured and are popular alternatives. All PelGar baits are flavour enhanced for maximum uptake and rapid control.

PelGar offers the opportunity to selected partners for bespoke formulations, packaging and 'own-brand' presentations.

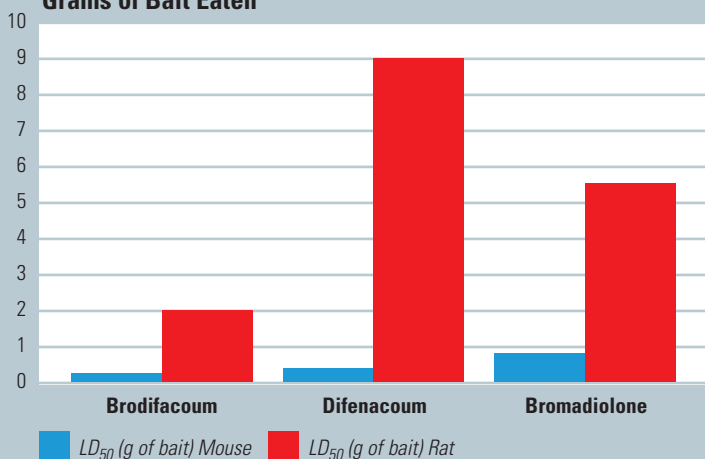

PelGar baits are offered in a range of innovative, tamper-evident packaging selected for ease of carrying, use and security. Bulk packs offer the regular user greater economy.

As with all anticoagulants, accidental poisoning or non-target poisoning with PelGar baits can be antidoted with vitamin K1.

Efficacy of Common Rodenticides against Rats and Mice

Grams of Bait Eaten

Anticoagulant	LD ₅₀ mg/kg Mouse / Rat	A.I. Concentration Normal Bait (ppm)	LD ₅₀ (g of bait) Mouse	LD ₅₀ (g of bait) Rat
Brodifacoum	0.27 / 0.40	50	0.2	2
Difenacoum	0.80 / 1.80	50	0.4	9
Bromadiolone	1.75 / 1.125	50	0.9	5.6

Toxicity data taken from the Pesticide Manual. Other industry sources may show slightly different values.

PelGar Ready-for-use Baits

Pellet Bait is a ready-for-use bait formulated using a blend of cereals, sugars, proteins and fats, with taste adjuvants improve bait 'take'. It offers an extremely well balanced food supply and is ideal where the target rodent population has been feeding on a non-whole grain source of food.

Pellet Bait has an extremely long shelf-life, but is not recommended for outdoor use unless well protected from damp conditions. It is effective against all commensal rodents. Available in packs from 100g (sachets) to 25kg sacks.

Whole Wheat Bait is a ready-for-use bait formulated using food grade micronised (high temperature treated) wheat. Taste adjuvants and natural sweeteners improve bait 'take', and bio-stats inhibit the growth of fungi or bacteria when the bait is used in damp conditions.

Whole Wheat Bait is highly palatable to all commensal species, and is the ideal bait where the target rodent population is already feeding on whole grain. This bait is moisture balanced for improved uptake. Available in packs from 100g (sachets) to 25kg sacks.

Cut Wheat Bait is a ready-for-use bait formulated using top quality, dust-free chopped wheat. Taste adjuvants and edible oils improve bait 'take' and bio-stats inhibit the growth of fungi or bacteria when the bait is used in damp conditions. Cut Wheat Bait is highly palatable and acceptable to a wide variety of rodents, including all commensal species, but is especially favoured by mice. Available in packs from 100g (sachets) to 25kg sacks.

Pasta Bait is a ready-for-use bait formulated using high calorie clarified and stabilised lard and flour. Taste adjuvants and flavours improve bait 'take' and stabilizing agents prevent oxidation. Pasta Bait is extremely palatable and acceptable to all commensal rodents. Its high energy content makes it the preferred formulation to use in cold situations, or where rodents have declined to accept other baits. Available as 'T-bags', in mastic tubes or in 10kg bulk.

Wax Block Bait is a ready-for-use bait formulated using a blend of food grade paraffin wax, sugars and cereals. Taste adjuvants improve bait 'take' and bio-stats inhibit growth of fungi or bacteria when the bait is used in damp conditions. These 'cast' blocks are more moisture stable than extruded block formulations. They are effective against all commensal rodents. Available as 2.5kg and 6kg buckets or 1kg packs of 'uni-trays'.

Extruded Block Bait is a ready-for-use bait formulated using a blend of food grade paraffin wax, sugars and cereals. Taste adjuvants improve bait 'take' and bio-stats inhibit growth of fungi or bacteria when the bait is used in damp conditions.

Extruded blocks are less moisture stable than 'cast' block formulations, but can be more palatable to rodents due to a reduced level of paraffin wax. They are effective against all commensal rodents. Available as 2.5kg, 6kg and 10kg buckets or 20kg cartons.

All products listed are prepared as 0.005% w/w (0.05g/kg) of the second generation anti-coagulants difenacoum, bromadiolone and brodifacoum.
