

# TYRANT SUPER ME MICRO-EMULSION

**A potent broad-spectrum insecticide based on the synthetic pyrethroid alpha-cypermethrin, giving rapid knock-down and kill of both crawling and 'resting' flying insects.**

Tyrant Super ME is formulated as a high strength 'micro-emulsion' with unique formulation characteristics which produce super-fine insecticidal particles capable of penetrating wood and other low porosity surfaces.

Tyrant Super ME is specifically formulated for the control of red poultry mite and 'litter beetles' (*Alphitobius* spp.), but also offers excellent control of all other pests such as cockroaches, crickets, ticks, ants, flies, fleas, lice, fire-brats, silverfish, woodlice, centipedes, and other crawling and (resting) flying insects.

It contains 4.80% w/w alpha-cypermethrin, 4.80% w/w tetramethrin and 15.0% w/w of the synergist piperonyl butoxide. Piperonyl butoxide is able to protect the activity of the prime killing agent (alpha-cypermethrin) by interfering with, and disrupting, the insect's defensive enzyme system.

Tyrant Super 5 ME is usually able to prevent the onset of insecticide resistance in insect pests.

Tyrant Super ME should be diluted with water and applied using conventional compression spray equipment. Tyrant Super ME is available both as a cost-efficient 'bulk' pack, containing 5 litres of

product or as a convenient 0.5 litre 'visi-stripe' bottle. For red-mite control, a 60ml product dose will prepare 5 litres of 'ready-for-use' spray, which will treat 100 square metres of sprayable surface. This very high level of active material in the ready-for-use spray gives VERY GOOD control of other crawling and (resting) flying pests.

## Rapid Acting and Cost Effective

- Excellent 'flushing' activity, fast knockdown and kill of poultry red mites and beetles.
- Formulated as a high strength product with 'resistance management' capability.
- Good residual action on most common surfaces including wood, metal, plastics, wall-paper and carpets, and all other common domestic surfaces, as well as bricks and tiles.
- A very powerful broad-spectrum product against other significant public health pests.
- Supplied either as a cost-efficient 5 litre bulk pack containing over 85 full doses, or in a convenient and user friendly 0.5 litre 'visi-stripe' bottle, suitable for small-scale users.
- Excellent storage stability when stored in un-opened packs. Store above 5°C.
